

LONG TERM PAVEMENT PERFORMANCE PROGRAM DIRECTIVE

For The Technical Direction Of The LTPP Program

Program Area: Monitoring

Directive Number:

P-14

Date: April 21, 1997

Supersedes: T6600 FHWA v2.0

Subject: Upgrade of K.J. Law T6600 Software to Version FHWA 2.01

This new version of the K.J. Law software contains modifications made in response to feedback from the RCOCs. More importantly, it provides for uniform profiler operating software across the four regions, which is not currently the case.

The software modifications implemented in FHWA Version 2.01 do not require changes to the documentation; hence, the Users Guide provided with the initial T6600 software remains unchanged and should continue to be used as the main reference document. The new software should be installed on all computer being used to collect LTPP profiler data, replacing that copy currently installed on the LTPP profilers. Please refer to the T6600 documentation for detailed instructions on the installation of this software.

Note: A new printer set-up is provided with the T6600 FHWA v2.01 software, which allows for selection of a track feed or sheet printer. The installation of this software requires that the autoexec.bat file include the following command: Delete \KJL_SYS\Printer.data. This command will delete the printer.dat file; the user will then select the printer type each time the program is initiated. Alternatively, the option exists to replace the FHWA v2.01 replay.exe with the replay.exe from FHWA v2.0. This program has set-up from the printer.dat file (track feed) and does not have to create the printer set-up. If the user is utilizing the printer provided with the T6600 profiler, this is the more convenient and hence recommended option.

If there are any problems, please submit a profiler problem report (PROFPR) form in accordance with LTPP Monitoring Directive P-3.
